- ① manages audience data for advertisement
 - ▶ first-party data
 - ▶ third-party data
- ② defines new target segments by
 - ▶ merging first party data
 - ▶ optimizing marketing budget

first party data

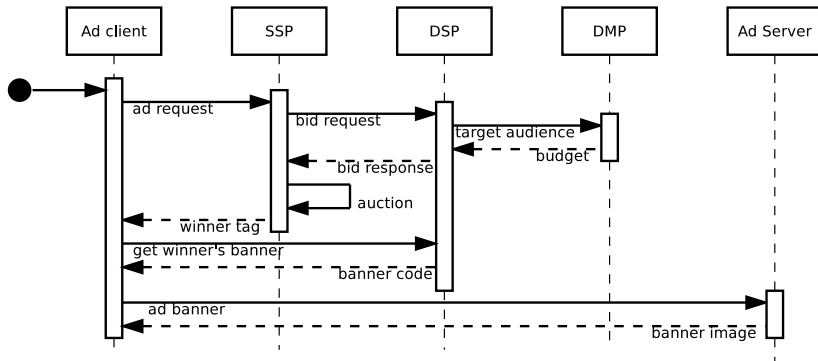

- behavior, actions or interests across the company's website
- data in CRM
- subscription data
- social data
- cross-platform data

third party data

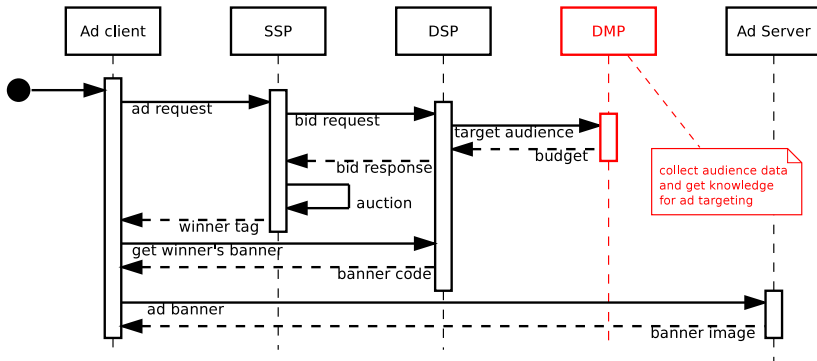

- generated on other platforms
- aggregated from other websites
- provided by other companies

Data Management Platform

Data Management Platform

DMP and DSP

In-house

Audience data

- collect *first party* audience data
- merge with third party data

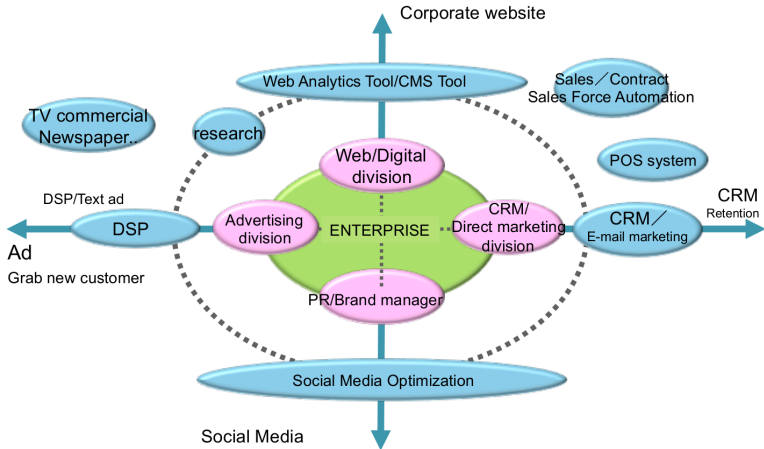

Advertisement

- define *new* market segments
- optimize marketing budget

DMP and DSP

How to integrate?

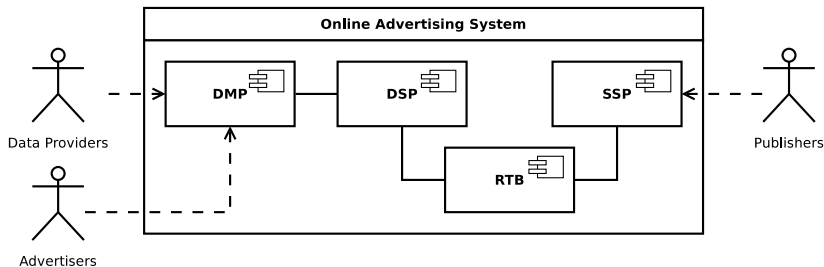

How to integrate?

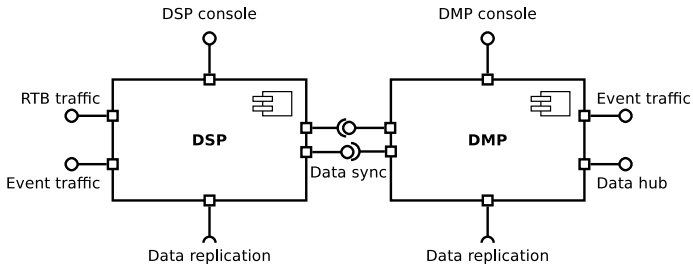

DMP and DSP

Positioning in the Online Advertisement Ecosystem

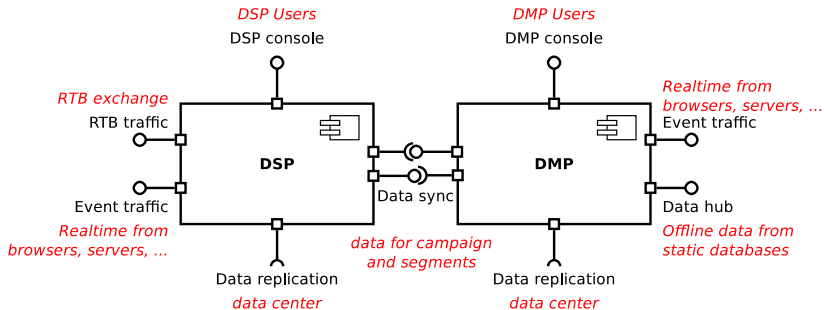

DMP and DSP

Interaction

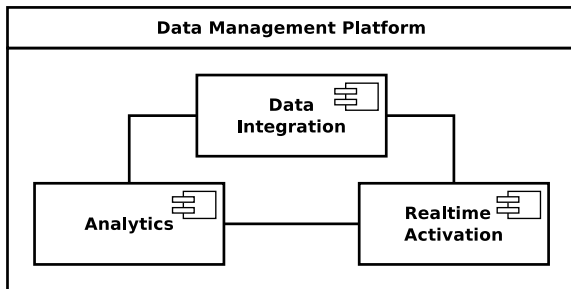

DMP and DSP

Interaction

DMP

Components

① Data Integration

- ▶ Schema integration
- ▶ Record linkage
- ▶ Data sanitation

② Analytics

- ▶ Query definition and optimization
- ▶ Machine Learning
- ▶ Data Mining

③ Real-time activations

- ▶ RUP fast storage
- ▶ Segment evaluation
- ▶ Online classification

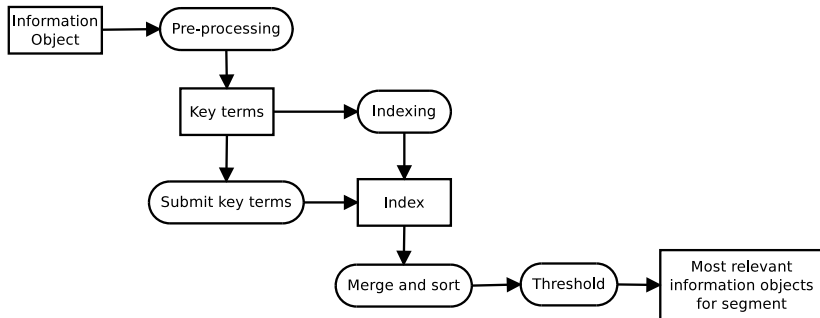

Contextual Analysis and Segmentation

- ① Analyze pages and create segments
 - ▶ N-gram analysis on page content (text and images)
 - ▶ terms scoring and thresholding
 - ▶ segment assignment by matching
- ② Multi-level segmentation
 - ▶ categories (statically defined by humans)
 - ▶ subcategories (dynamically created and updated)
- ③ Information Retrieval
 - ▶ term indexing and retrieval
- ④ Hierarchical segmentation

Contextual Analysis and Segmentation

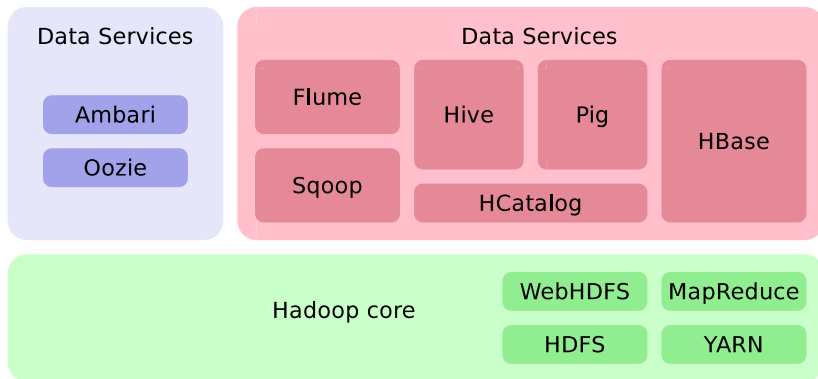

Summary

- Linear Poisson Regression
 - ▶ $p(y) = \frac{\lambda^y e^{-\lambda}}{y!}$, $\lambda = \mathbf{w}^T \mathbf{x}$
- Estimate CTR as $\hat{CTR}_i = \frac{\lambda_i^{click} + \alpha}{\lambda_i^{view} + \beta}$
 - ▶ $\frac{\alpha}{\beta}$ default CTR for new users
- Expected click/views are computed *offline* and updated incrementally in real-time
